Vaccinations can be
Life-Saving
or
Life-Threatening
depending on how
they are administered

Did you know that vets are
OVER-DOSING and
OVER-VACCINATING
our pets, causing unnecessary
illnesses and untimely deaths?

Did your vet ever mention that a 7-lb
dog receives the same rabies vaccination
as a 125-lb dog?

The one-year and three-year rabies
vaccination is one and the same. In
addition, the time frame
labeling is completely arbitrary meant to
mislead the consumer that protection
expires. It does not correlate with
immunity!

Does your vet offer you the option of Titer
Testing, which checks the level of
antibodies and indicates immunity?
It is medical malpractice to administer a
rabies vaccine booster
without first checking a rabies titer.

Conformity to custom is not a legal
argument that will protect the veterinarian.
The veterinarian must first adhere to their
Oath rather than an outdated law
that would force them to injure or kill their
patient!

***It is time to start
educating yourself and
your Veterinarian
and Protecting the Pets!***

Kansas State Diagnostic Lab

If your Vet calls Kansas State
Diagnostic Lab at 785-532-4483,
they can set up and receive a
Diagnostic Account Number. With
this number, they can go to this web
address: <http://www.ksvdl.org>

Then by following the prompts:

1. Admission forms,
2. Core Vaccine Titer - submit the
client/pet information, and
3. KSDL will send via e-mail a
free USPS shipping Label &
submission form to your vet.

**For a \$54 charge KSDL will
do a package of titers for
Parvovirus, Distemper Virus,
Adenovirus and Rabies
Virus.**

**For Rabies alone, the
charge is \$32**

**All pricing depends on
your vet setting this up
online.**

**They Draw the blood in a
red-top serum separator
tube and centrifuge for 10
minutes**

**If you or your vet have any
questions, ask for Shirley
or Kelsey. They are very
customer-service friendly.**
